# STOP A COAL MINE NEXT TO BUNDY

The blue dotted line indicates the area Fox Resources has asked for as a potential coal mine.

A modern open-cut coal mine:

- follows the coal seam where ever it goes, destroying everything in its path,
- creates dust clouds that spread far and wide before the dust settles,
- pumps huge volumes of contaminated water out of the pit to allow machinery to operate,
- pumps continuously as the coal seams are 40 meter or more below ground level; water then soaks in from surrounding areas, increasing the risk of saltwater intrusion from the sea,
- dumps the contaminated water into the nearest stream, the Kolan river,
- needs many trucks to transport the coal to the nearest harbour, the Bundaberg Port,
- is highly mechanised and uses minimal labour,
- destroys more permanent jobs than it creates: mines run out, farming does not.

**THIS IS HAPPENING ALL ACROSS REGIONAL QUEENSLAND.  
YOU CAN HELP STOP THIS HERE AND THROUGHOUT QUEENSLAND.**
